Extensible Service Platform for Small Business

- ▶ Brand & Customize
- ▶ Best of Breed Applications
- ▶ Web Portal Status Monitor
- ▶ Persistent Desktop Presence

ESP Small Business allows business ISP, Telco, and other providers to offer a customizable security solution under their own brand...

- Construct a best-of-breed suite with security modules from leading vendors in a single, integrated console.
- View live, up-to-the minute status for each client with a simple, graphical, always-accessible web-portal.
- Brand the console and embed links to value-added services from your existing library of support & service offerings.

The ESP Small Business security software-as-a-service platform enables telecom carriers, business ISP's, systems integrators and managed security service providers (MSSPs) to design and build private-label security solutions, including branded client consoles and web-portals, based on market-leading, enterprise-class brands and applications.

The Authentium ESP Small Business Platform includes a variety of best-of-breed virus protection, anti-spyware, firewall, content filtering, and other optional modules. The desktop client is fully brand-able, allowing the provider to establish a bi-directional communications portal with every small business customer through a 'persistent desktop presence'.

With ESP Small Business, our partners can extend their services, enhance their value, and create significant recurring revenue opportunities. Only Authentium can provide a complete, customizable solution for client security management under your brand.

Small businesses need tools to protect their productivity, profitability, and communications just as much as the Fortune 500, but with limited resources, it can be challenging to research, purchase and manage a complete security solution. Unlike traditional security suites, Authentium's ESP Small Business security suite is built on industry-leading technologies from multiple vendors. Through extensive research and testing, Authentium has alleviated the burden from the small business owner. We've determined the best combination of antivirus, anti-spyware, content control, and firewall software available, and bundled it into one suite! Don't settle for the 'all or nothing' approach offered by so many others - get the best in every category with the Authentium ESP Small Business security suite.
