

**The power to get things done right.  
Easier. Faster. The first time.**

**NEW!  
FEATURE-RICH  
VERSION  
6.0**

**Deploy to every local, mobile and remote PC or Windows® server across your entire organization—via LAN, WAN, e-mail or the web.**

## **New and advanced features in PRISM DEPLOY® 6.0:**

**Smart Update™**– Make a configuration rule once, then let Prism Deploy automatically group and target your systems for dynamic software deployment, updating, repair or removal. Eliminate the need for repeated, time-consuming inventory scans with a set-and-forget process that continuously checks computer states and automatically performs the compliance tasks that you specify. *A Prism Deploy advanced feature.*

**Package Authentication**– Make rollouts more secure by applying a digital signature to a package so clients only install authorized software. Ensure that only the administrators who are authorized can view and edit packages, making your entire deployment system safe. *A Prism Deploy advanced feature.*

**Permissions Packaging**– Achieve better deployment reliability by graphically distributing security settings along with applications. Prism Deploy captures, packages and deploys applications that require changes to special registry and NTFS permissions for controlled, reliable, automated rollouts. *A Prism Deploy advanced feature.*

■ **Security Roles**– Specify pre-defined roles for administrators and customize permissions of roles to completely secure deployment or updating processes.

■ **Component Installation**– Experience the flexibility of Prism Deploy's component architecture, including the Administrator Console, Package Builder and Prism Deploy Server, which can be optionally installed on separate machines to allow distributed and secured tasking.

■ **Client Status Remote Display**– Get instant insight into your network state with an enhanced display of remote client status, including logged user, last poll, IP address, subnet, MAC address, client version, polling interval and more.

■ **SQL Database Architecture**– Prism Deploy 6.0 is built on a SQL database for improved scalability and integration with industry-standard technologies. Integrate Prism Deploy with an existing SQL database, or let Prism Deploy help you install the Microsoft SQL Desktop Engine (MSDE).

■ **Enhanced Reporting**– See the big picture and drill down into the details of your deployments. A completely new report interface for the Prism Deploy Console gives you much greater detail on actions and status for improved deployment diagnostics. Reports include full Deployment Summaries, Deployment Log, Administration Action Log, Communication Status, Group Member Reports and more.

■ **Report Data Management**– Analyze your deployment processes with enhanced report data that can be filtered, sorted, customized into various formats, and exported into HTML, Microsoft® Excel or ANSI text.

■ **Wake on LAN**– Maximize your organization's productivity. With supporting hardware, Prism Deploy can wake or activate offline computers to deploy packages efficiently when bandwidth usage is low or during non-working hours.

■ **Checkpoint Restart**– Keep your deployments going while making the most efficient use of network bandwidth and local disk space. Unlike other solutions, Prism Deploy incrementally delivers and installs deployment packages, so it can resume distributions where they were interrupted without having to redeliver the entire deployment package.

*Software deployment as it should be.*

# Precision software deployment. Absolute reliability. Prism Deploy 6.0

*If your software installations require a high degree of manual intervention during or after the rollout, you may be wasting valuable time and IT resources. If software deployment is becoming a full-time job for you and your staff, then it's time to make a change.*

*What you need is a dedicated deployment solution. A solution that vastly improves reliability with an unprecedented array of configuration assessment functions and pre-deployment conflict checking. One that delivers software applications and updates to targeted destinations with greater flexibility and control. A solution that eliminates the need for repeated inventory scans by automatically profiling assets and network configurations. A solution that quickly and easily automates the most advanced tasks in complex environments and eliminates the need for tedious manual scripting.*

You need **Prism Deploy.**
