

ESP

Module

- ▶ Protect critical data
- ▶ Restore classroom or lab computers to 'fresh' state daily
- ▶ Fix pesky problems with an instant return to yesterday

RestoreIT® Backup & Restore

Powerful, easy-to-use data backup and recovery...

Imagine losing everything; every file, every folder, and every piece of critical data they contain. For most organizations the most critical company data resides on the hard-drive of each employee, not a central server. Losing this data to a glitch, faulty program, or corrupted hard drive could cost hundreds of hours in productivity and millions of dollars in lost knowledge. In addition, shared computers in places like libraries, classrooms, or labs can be bogged-down or rendered useless by the actions of every user, forcing constant re-installations or replacements. FarStone RestoreIT can be deployed to every end-point PC in your organization using Authentium's ESP Enterprise platform, preserving critical data or refreshing shared systems to a pristine state at the end of each day.

RestoreIT 7 is a powerful, easy-to-use Personal Disaster Recovery™ utility that automatically backs up all files on a computer. This enables you, in the event of a virus or hacker attack, a Windows® crash, a software installation gone wrong, or a problem caused by human error, to roll back a system to a point where it was working properly. Since it loads before Windows, RestoreIT will recover all files, system and personal, even when Windows does not boot.

During installation, RestoreIT Pro saves an image of your entire system to a protected partition on your hard drive, and keeps an ongoing record of all saved changes to your personal files. It can be configured to save static snapshots of your entire system at regular intervals to your hard drive, a network drive, or a USB device. RestoreIT's proprietary technology makes data recovery quick, painless, and accurate. You can search or browse for files or folders to restore in a Windows-like interface. System recovery returns every file on your hard drive to a static backup point, while file-level recovery lets you restore a select personal file to an incremental backup point, leaving the rest of your system untouched.

Features & Benefits

- **Ease of Use:** The software has a simple, intuitive interface that even a novice can understand.
- **Ongoing, Automatic Backup:** At the sector level of your hard drive, RestoreIT monitors all incremental changes to your files. You can easily set it to automatically back up your entire system every hour, every day, every week, or at other intervals.
- **Total System Recovery:** Quickly restore the operating system of a computer damaged by a Windows crash, virus attack, accidental file deletion, or software bug—even when Windows is down.
- **Password Protection:** Restrict user access to RestoreIT; lock your computer at the DOS level.
- **File-Level Recovery:** Recover select files or folders without affecting any other files on your system.
- **Unlimited Incremental Restore Points:** The number of restore points on your system is restricted only by the availability of disk space.
- **Small Disk Space Requirement:** RestoreIT uses a real-time, incremental backup technology and compresses its stored image, taking up only a small portion of total hard drive space on most computer systems.
- **Multiple Backup Options:** Back up your computer's hard drive to a protected local partition, a network drive, a USB device, or to CD or DVD.

Technical Specifications

RestoreIT resides between the system BIOS of a PC and its operating system. During installation, the software creates a hidden partition where it saves complete (static) and partial (incremental) restore points. Unlike other data backup utilities, RestoreIT enables both file-level recovery, allowing you to undo changes to a personal file by returning it to an incremental backup point, and system recovery, which restores every file on a hard drive to a chosen static backup point.

System Requirements

- CPU: Intel Pentium 133 or higher
- RAM: 256MB or more
- Hard Drive: 400MB free space for the program and partition
- Operating Systems: Windows 2000 and XP platforms for desktops and laptops
- RAID Support: RAID 0/1
